

Basement Waterproofing Installation

Basement Waterproofing

1. Plastic and clean drop cloths are used to cover any vents, flooring, furniture, etc...

2. Concrete is removed from the perimeter of the home.

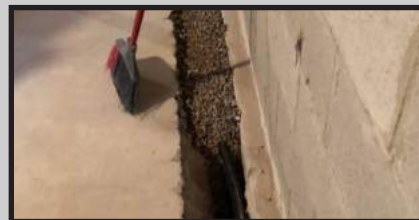

3. Soil in trench is removed to the depth of the footing.

4. For Block Walls: Holes are drilled in each core and joint of the block at the base of the wall, below the floor line.

5. Drain Tile is installed in the excavated trench.

6. Trench is filled with pea rock to the base of the floor height. SafeEdge™ is installed on top of the rock along with a moisture barrier.

The concrete floor is restored and clean up begins.

NewHopeKitchenAndBath.com

World's Most Advanced Basement Waterproofing System!

Sump Baskets

- Sealed state-of-the-art baskets
- Radon sealed
- See-through hinged lid
- Large opening for easy access
- Industry-leading sump pumps and back-up systems

Radon / Inspection Port

- Installed with every system

Multi-Flow™ Tile

- Erosion proof
- Pea rock backfill filters water
- Can be used with or without geotextile fabric based on soil types
- Directs radon to radon ports to be vented outside

SafeEdge™

- Minimizes airflow between edge and wall
- Radon and moisture vapor seal
- Overflow protection
- Holds vapor barrier in place
- Allows condensation from the wall to drain into the drain tile system

SafeBasements brings over 30 years of experience in the building and basement waterproofing industry. SafeBasements is dedicated to repairing common and often dangerous problems associated with excessive moisture.

There are several waterproofing edging options as shown below. With SafeBasements you can be confident that you're getting the most complete and affordable solution to your basement problem.

SafeEdge™ Lineup

SafeEdge MAX™ Line

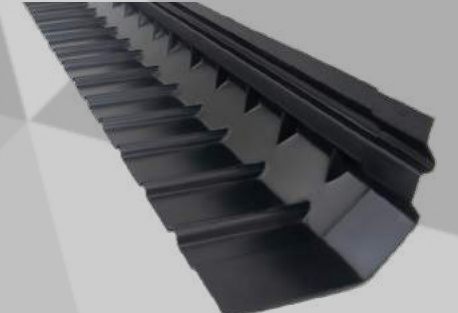

SafeEdge™

Tried and true, our original water control edging.

SafeDrain™

Particularly effective when tile isn't an option.

SafeEdge MAX™

New SafeEdge with greater structural support.

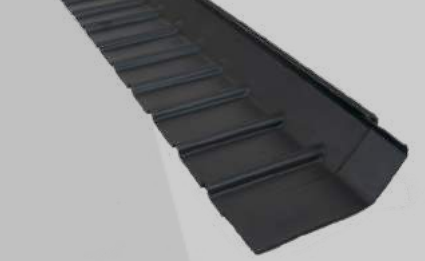

LP SafeEdge™

Goes in under finished walls.

SafeTrack™

For Monolithic Floors.

LP SafeEdge MAX™

Low-Profile with increased structural Support.

“With moisture problems, the best approach is almost always to remove or control the source of the moisture, not to try to stop it as the last line of defense.”

University of Minnesota Extension

To read the study “An Overview of Solutions to Basement Moisture Problems” by the University of Minnesota go to www.extension.umn.edu/environment/housing-technology/moisture-management/moisture-in-basements-causes-and-solutions/

Our drainage system is a step above traditional methods. Not only does it work to keep soil gases out of your home, but it also regulates water flow and minimizes clogs. Unlike many other waterproofing systems, our advanced system with its patented seal helps protect your basement from moisture while being radon mitigation ready, giving you a drier, safer living area.

SafeBasements continues to develop and research all basement waterproofing products to gather and evaluate the best solutions for our customers. We strive to provide the finest service and quality possible.
